By Erik Brynjolfsson and Andrew McAfee

In *Man vs Machine*, Erik Brynjolfsson and Andrew McAfee argue that technology is rapidly surpassing human intelligence and that this will have profound implications for the future of work, wealth, and society. They explore the potential benefits and risks of this technological revolution and offer a roadmap for how we can prepare for and harness its power.

Brynjolfsson and McAfee begin by defining intelligence as the ability to learn and solve problems. They argue that computers are already better than humans at many cognitive tasks, such as playing chess, recognizing objects, and translating languages. And they believe that computers will soon surpass humans at even more complex tasks, such as writing, composing music, and designing new products.

This technological revolution will have a profound impact on the future of work. Brynjolfsson and McAfee argue that many jobs that are currently performed by humans will be automated by computers in the coming years. This will lead to job losses and wage declines for many workers. However,

they also believe that new jobs will be created in the tech sector and that overall economic growth will continue.

The authors also explore the potential risks of this technological revolution. They worry that artificial intelligence could be used to create autonomous weapons, surveillance systems, and other technologies that could be used to oppress people. They also worry that the gap between the rich and the poor could widen as technology becomes more concentrated in the hands of a few.

Despite these risks, Brynjolfsson and McAfee believe that the potential benefits of this technological revolution outweigh the risks. They argue that technology can help us solve some of the world's most pressing problems, such as climate change, poverty, and disease. They also believe that technology can help us to live longer, healthier, and more fulfilling lives.

Man vs Machine is a thought-provoking and important book that explores the potential benefits and risks of the coming technological revolution. Brynjolfsson and McAfee offer a roadmap for how we can prepare for and harness the power of technology to create a better future for all.
