Drawing on his extensive experience in the field, Nagl argues that the U.S. military must adapt to a new era of warfare characterized by increased complexity, uncertainty, and interconnectedness. He calls for a new approach to force projection that is more flexible, agile, and sustainable, and that emphasizes the importance of building partnerships and alliances.

Projecting Force After 11 AUSA Books is a must-read for anyone interested in the future of warfare. Nagl's insights are invaluable for policymakers, military leaders, and anyone else who wants to understand the challenges and opportunities facing the U.S. military in the 21st century.

Table of Contents

-
- The Changing Character of Warfare
- The Challenges Facing the U.S. Military
- A New Approach to Force Projection
-

The United States has been the world's preeminent military power for over a century. However, the world is changing, and the U.S. military must adapt to a new era of warfare characterized by increased complexity, uncertainty, and interconnectedness.

In *Projecting Force After 11* AUSA Books, author and military expert John A. Nagl argues that the U.S. military must adopt a new approach to force projection that is more flexible, agile, and sustainable. He calls for a shift from large-scale, expeditionary operations to a more distributed and dispersed approach that emphasizes the importance of building partnerships and alliances.

The Changing Character of Warfare

The character of warfare has changed dramatically in recent years. The rise of new technologies, such as drones and cyber weapons, has made it possible to conduct warfare from a distance, with less risk to human life. At the same time, the spread of globalization has made the world more interconnected, creating new opportunities for conflict and instability.

These changes have made it more difficult for the U.S. military to project force effectively. Traditional methods of force projection, such as large-scale amphibious landings and air strikes, are no longer as effective as they once were. The U.S. military must find new ways to project force that are more flexible, agile, and sustainable.

The Challenges Facing the U.S. Military

The U.S. military faces a number of challenges in the 21st century. These challenges include:

- **The rise of new technologies:** The rapid development of new technologies, such as drones and cyber weapons, is changing the character of warfare and making it more difficult for the U.S. military to project force effectively.
- **The spread of globalization:** The spread of globalization has made the world more interconnected, creating new opportunities for conflict and instability. The U.S. military must be prepared to respond to a wider range of threats in a more dispersed and distributed manner.
- **The changing nature of conflict:** The nature of conflict is changing, with a growing emphasis on hybrid warfare and irregular warfare. The U.S. military must be able to adapt to a wider range of threats and challenges.
- **Budget constraints:** The U.S. military is facing increasing budget constraints, which are making it more difficult to maintain a large and well-equipped force.

A New Approach to Force Projection

The U.S. military must adopt a new approach to force projection that is more flexible, agile, and sustainable. This new approach must be based on the following principles:

- **Flexibility:** The U.S. military must be able to respond to a wide range of threats and challenges, in a variety of different environments. This requires a more flexible and agile force that can be deployed quickly and easily.
- **Agility:** The U.S. military must be able to move quickly and adapt to changing circumstances. This requires a more agile force that can operate in a distributed and dispersed manner.
- **Sustainability:** The U.S. military must be able to sustain its operations over a long period of time. This requires a more sustainable force that can operate with less logistical support.

The U.S. military is already taking steps to implement this new approach to force projection. The Army has created new units, such as the Stryker Brigade Combat Teams, that are more flexible and agile than traditional units. The Navy is developing new ships, such as the littoral combat ship, that are more versatile and can operate in a wider range of environments. The Air Force is developing new aircraft, such as the F-35 Joint Strike Fighter, that are more stealthy and can carry a wider range of weapons.

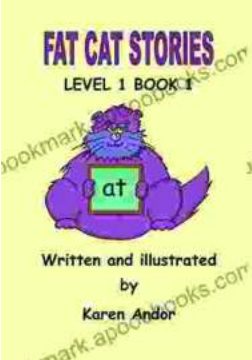

The U.S. military is facing a number of challenges in the 21st century. However, the military is also taking steps to adapt to these challenges and develop a new approach to force projection that is more flexible, agile, and sustainable. This new approach will help the U.S. military maintain its preeminence in the world for years to come.
